

YAMAGATA Solution to Authenticity Identification

Adopt cutting-edge digital information technologies

Shaoxing Shanxing Intelligent Technology of YAMAGATA Group, is a **national high-tech enterprise** (has obtained the high-tech enterprise certification).

Chatbot, developed based on AI voice recognition and other technologies, has been successfully imported to some local governments in Japan and China and has won several innovation competitions.

This time, YAMAGATA Group has proposed a solution to authenticity identification by using blockchain technology.

Services Using Blockchain Technology

Authenticity Identification / Traceability

Cross-border e-commerce/Cloud service platform for SMEs

For cross-border e-commerce staff and SMEs that have difficulty in large-scale investing in development systems, the original system can be started on a small scale with fixed functions.

Main Functions

- Management of tracking information
- Management of warranty records
- Issue of quality certificate

It links all kinds of information to the block chain with open and transparent, traceable, and tamper-resistant data, thus realizing the whole life cycle monitoring of product production, circulation and consumption, and achieving product anti-counterfeit traceability with traceable source, traceable destination and traceable responsibility.

tracking information

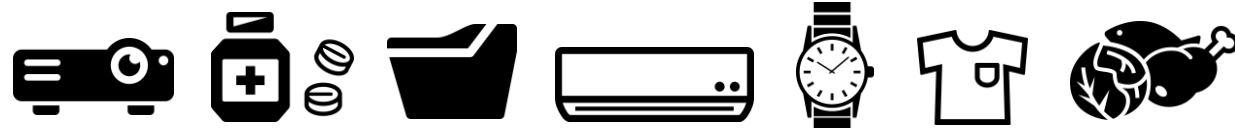

warranty record

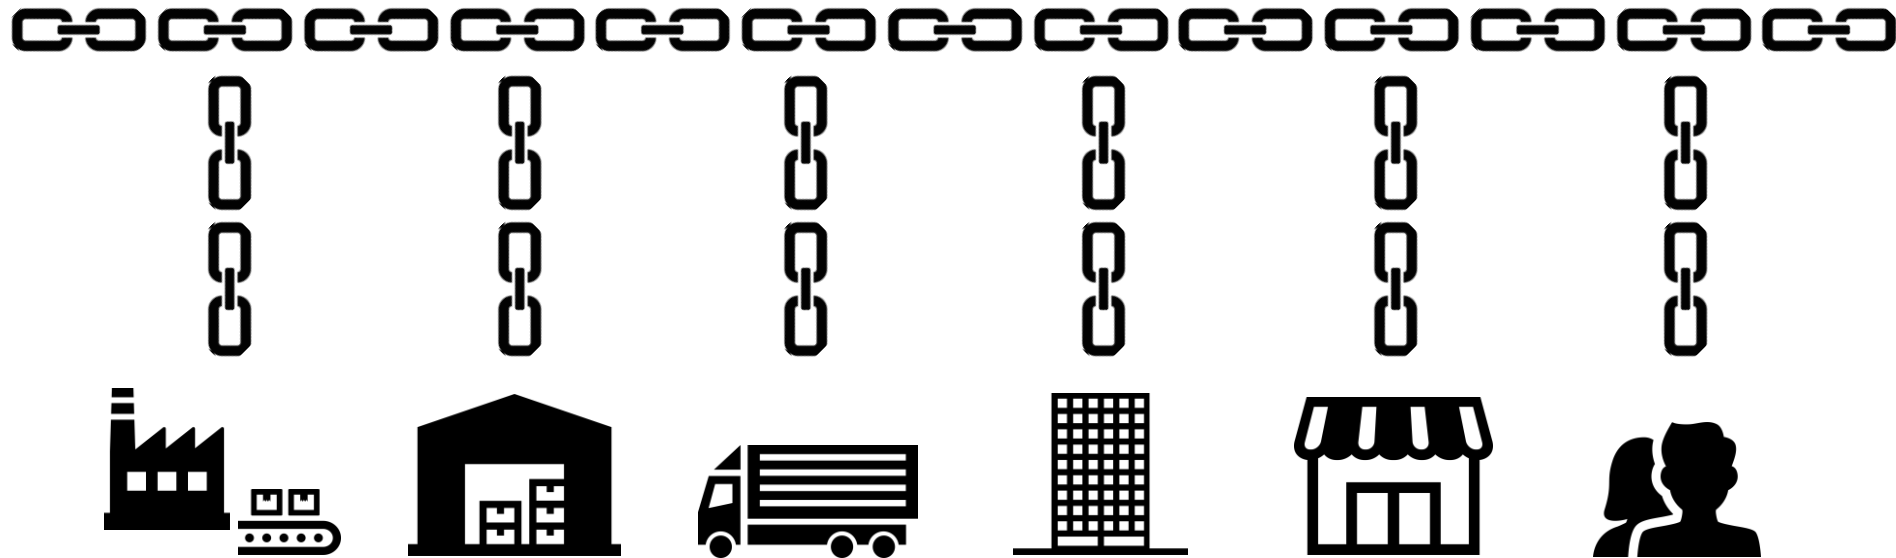

quality certificate

Import Example Shapes (Supplier Chain)

Used in a variety of applications

- ✓ Enhanced visibility into the supplier chain
- ✓ Protect product source
- ✓ Product flow and status tracking
- ✓ Guarantee product quality

Each step of the process information will be kept as a record
